Assessment of Water Supply Systems in Hospitals in Pakistan and Investigation of Measures for Improvement

Safe water supply, in terms of quantity and quality, to the hospitals is a matter of serious concern due to hygienic reasons both for the patients and the staff.

Most of the people in Pakistan are used to being treated in the government hospitals but private hospitals are also operating there and the study aimed to assess the water supply systems in the hospitals from both of the sectors.

The measures to be taken for the improvement were investigated and a standard operating procedure for water supply assessment for hospitals in Pakistan was formulated subsequently.

Date: Tuesday, July 8, 2014 Time: 17:30

Location: [Pfaffenwaldring 7a, WAREM old building \(wooden building\)](#)

WAREM Students and other interested parties are cordially invited.

Auslandsorientierter Studiengang „Water Resources Engineering and Management - WAREM“

Program Coordinator
Prof. Dr.-Ing. Silke Wieprecht

Course Director
